

ENMO[®] hydro
ENVIRONMENTAL MONITORING

aj BLOMESYSTEM

**developments in dynamic, continuous and
automated water quality monitoring**

- overview
 - ENMO[®]hydro
 - co-operation
- conception
 - software & hardware
 - features
- future

overview

conception

future

- efficient control of automated water quality measuring networks
- early detection of disasters and accidents, evaluation of hazard potential
- observation of short- and long-term changes in water quality
- innovative software environment
- a contribution to the compliance of the EU WFD

overview

conception

future

- result of a co-operation project
- start: 2009
- live: 2011
- Gateway Hamburg Portal:
data is made accessible to the public

 **Institut für Hygiene und Umwelt**
Hamburger Landesinstitut für Lebensmittelsicherheit,
Gesundheitsschutz und Umweltuntersuchungen

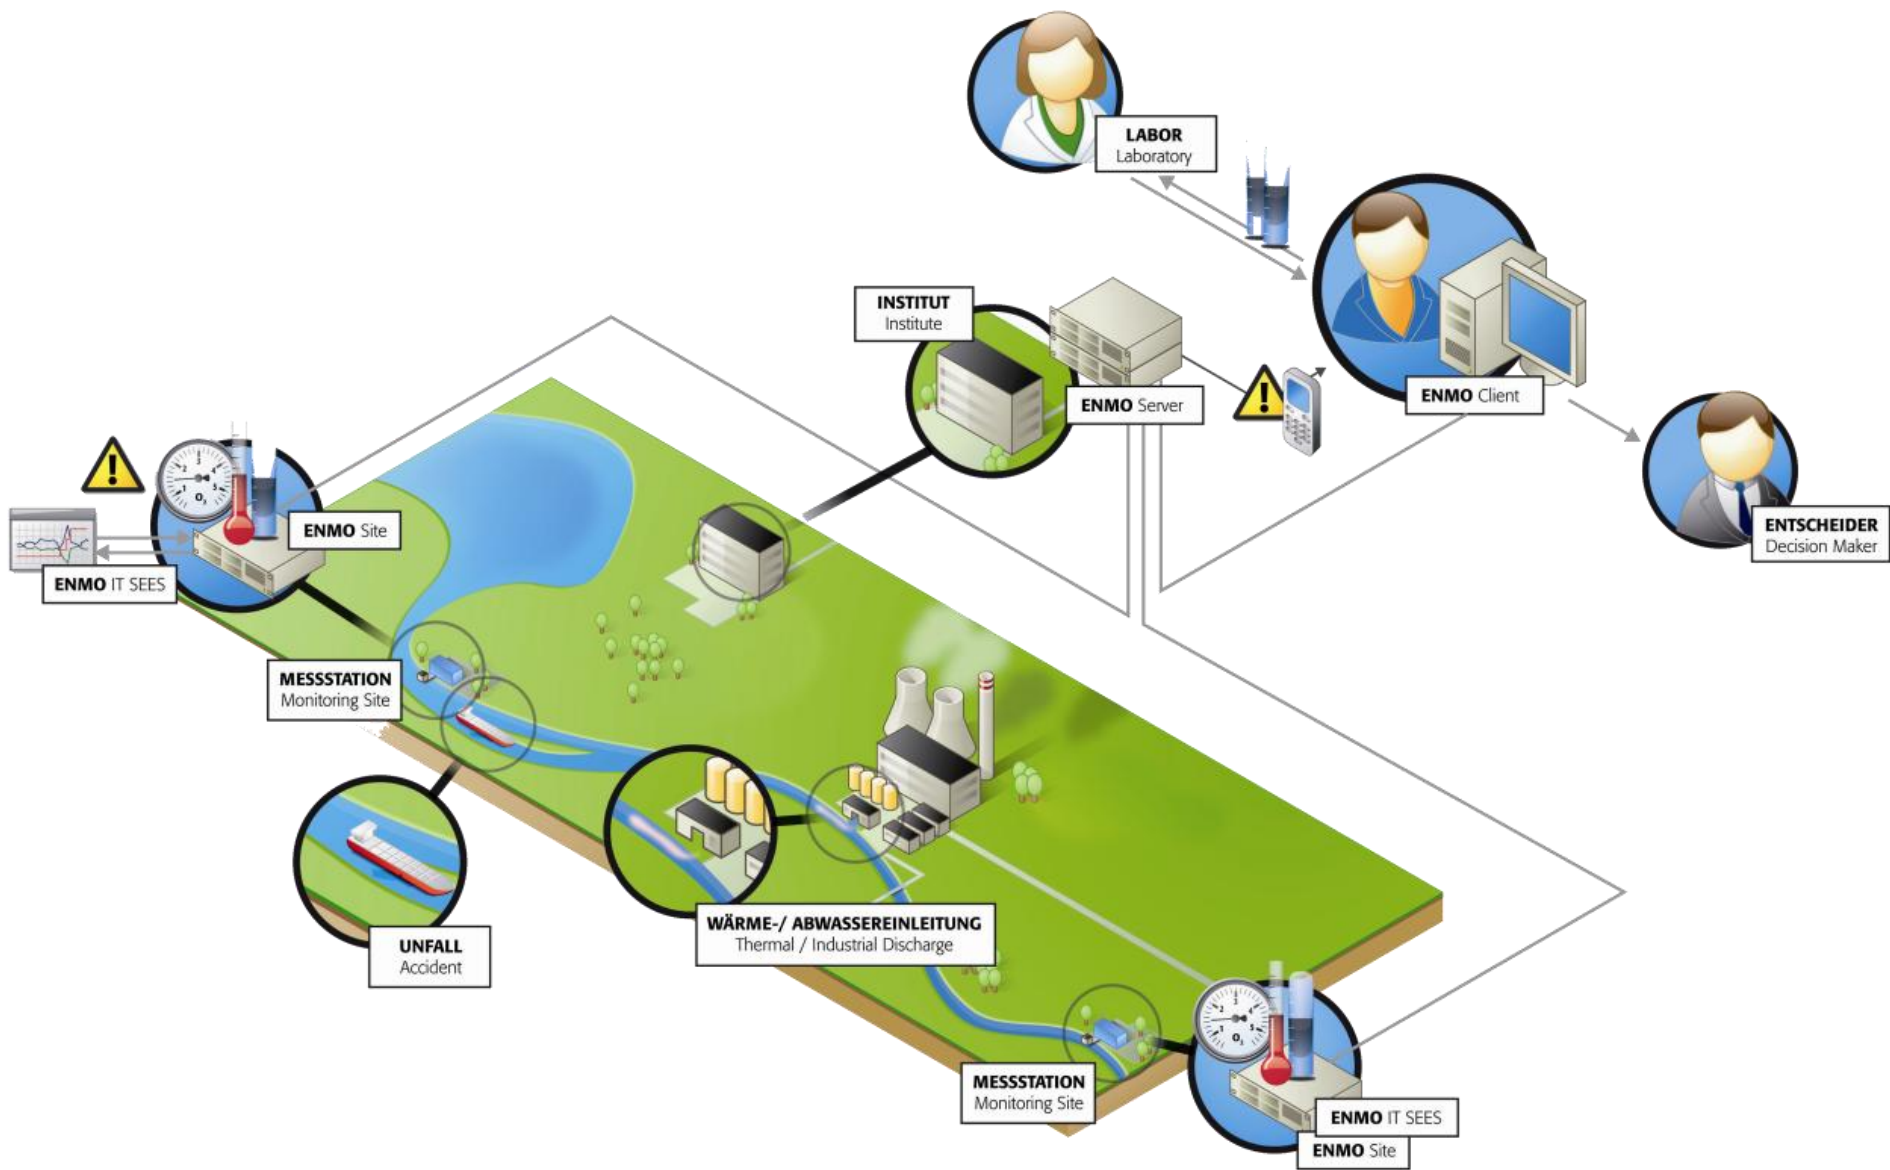

overview

conception

future

- software:
 - .NET application
 - multi-tier-system
 - web based
- 3 components:
 - ENMO Client
 - ENMO Server
 - ENMO Site

overview

conception

future

- ENMO Site
 - continuously collects data
 - connected to IT SEES plug-in
 - buffers data
 - transmits data to server
- ENMO Server
 - executes business logic (e.g. calculation of mean values)
 - collects data
 - evaluation of incoming data
 - performs actions such as sending SMS
- ENMO Client:
 - presentation, evaluation and validation of transmitted data
 - modern Windows GUI

overview

conception

future

- as many measuring stations as needed can be connected
- various sensors combined in a sensornet
 - toximeters
 - temperature
 - oxygen level
 - pH – value ...
- Matricon OPC Server standardizes all incoming data via MODBUS TCP

overview

conception

future

- effectiveness/promptness
 - works with emission-oriented alarm thresholds
 - early detection of anomalies
 - notification system
 - numerous options for data evaluation, illustration and export
 - unlimited access to data
 - online data transfer in scalable intervals

overview

conception

future

- quality
 - DIN ISO 17025
 - audit trail
 - version control
 - maintenance planning
 - logbook
 - defined access rights per user
- integration
 - easily integrates to existing systems (web services)
 - visualization of measured data via web browser

overview

conception

future

- advantages
 - high information content of data: continuous measuring
 - up-to-date data: permanent data transmission
 - high quality data and reliability: remote monitoring
 - permanent availability of measured data
 - early detection of disasters, accidents, hazard potentials
 - reduction of personnel costs for measurements
 - reduction of costs of control in measuring stations
 - new tasks: e.g. device monitoring
 - monitoring and administration of devices / stations, data acquisition, data evaluation, data illustration, data export, quality control, notification and alarm system in **ONE** system

overview

conception

future

- possible applications: monitoring networks
 - countries
 - federal states / provinces
 - municipalities
 - rivers
 - dams
 - lakes
 - groundwater
 - water supply companies
 - industrial enterprises
 - ...

Common Quality management Administration **Measuring stations**

Read data Save data Flush data Add measuring station Delete measuring station Copy measuring station
